# Specification

Model: 12V 2/10/20/30/40A

Model No: I-7015

Revision: 1.0

# **Table of Contents**

- 1. INPUT REQUIREMENTS
- 1.1 INPUT VOLTAGE
- 1.2 INPUT FREQUENCY
- 1.3 INPUT POWER
- 1.4 INPUT PROTECTION
  - 1.4.1 INPUT CURRENT PROTECTION
- 1.5 EFFICIENCY
  - 2. OUTPUT REQUIREMENTS
- **2.1 MINIMUMM OUTPUT VOLTAGE**
- 2.2 REFERENCE CHARGING CURVE
- 2.3 MINIMUM CRANKING ASSIST OUTPUT VOLTAGE
- **2.4 OVER POWER PROTECTION**
- **2.5 SHORT CIRCUIT POTECTION** 
  - 3. ENVIRONMENT
- 3.1 OPERATING / STORAGE TEMPERATURE
- 3.2 **HUMIDITY**
- 3.3 SHOCK AND VIBRATION
  - 3.3.1 SHOCK NON-OPERATION
  - 3.3.2 VIBRATION
- 3.4 CALCULATED MEAN TIME BETWEEN FAILURES (MTBF)
  - 4. SAFETY

#### 4.1 DIELECTRIC VLOTAGE WITHSTAND (HI-POT)

- **4.2 PRODUCT DROP TEST**
- **4.3 BALL IMPACT TEST**
- 4.4 STRAIN RELIEF TEST
- 4.5 CLAMP ATTACHMENT SECURITY
- **4.6 HANDLE ATTACHMENT SECURITY**
- 4.7 CLAMP RETENTION
- **4.8 CORROSION RESISTANCE** 
  - 5. EMC SPECIFICATION
- **5.1 EMI REQUIREMENTS** 
  - 6. MECHANICAL
- **6.1 DIMENSION** 
  - 6.1.1 PRODUCT
- **6.2 MATERIAL** 
  - 6.2.1 ENCLOSURE
  - 6.2.2 CLAMP

#### **6.3 INPUT CONNECTOR AND OUTPUT CABLE**

- 6.3.1 INPUT CONNECTOR/AC CORD
- 6.3.2 OUTPUT CABLE:

# 1 INPUT REQUIREMENTS

#### 1.1 INPUT VOLTAGE

The power supply must operate on a sinusoidal input voltage defined in table 1.

Input Range	Minimum	Nominal	Maximum	Unit
180~264	180	230	264	Vac

Table 1 - Input Voltage Range

#### 1.2 INPUT FREQUENCY

The power supply shall operate within specification 50±3 Hz.

#### 1.3 INPUT POWER

Continuous 685W, Engine Start 1350W.

## 1.4 INPUT PROTECTION

#### 1.4.1 INPUT CURRENT PROTECTION

A fuse with rating of  $\underline{10}$  A /  $\underline{250}$  V( Time Lag ) shall be installed on the input line side near the input connector to provided protection to the power supply.

#### 1.5 EFFICIENCY

The power supply efficiency shall not be less than 80% at the maximum load of section 2.2

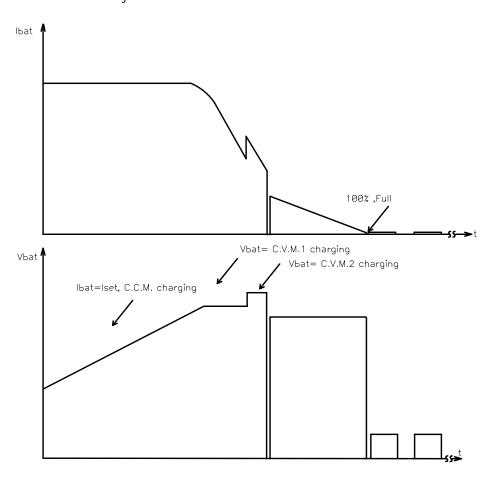

# 2 OUTPUT REQUIREMENTS

#### 2.1 MINIMUM OUTPUT VOLTAGE

	Rated Output Currrnt (A)	Minimum Output Voltage (V)
1	2	12.48
2	10	12.78
3	20	13.02
4	30	13.20
5	40	13.38

**Table 2 – Minimum Output Voltage** 

#### 2.2 REFERENCE CHARGING CURVE

# 2.3 MINIMUM CRANKING ASSIST OUTPUT VOLTAGE

Rated Output Currrnt (A)	Minimum Cranking Assist Output Voltage (V)
100	7.2

## 2.4 OVER POWER PROTECTION

Over power protection shall operate at <u>110% Max.</u> of rated power defined in section 2.2 at table-1 line input conditions.

## 2.5 SHORT CIRCUIT POTECTION

Power supply shall have self to protect against short conditions.

## 3 ENVIRONMENT

#### 3.1 OPERATING / STORAGE TEMPERATURE

Operation: 0 to  $40^{\circ}$ C.

Storage: -20 to 80°C

#### 3.2 HUMIDITY

Operation: 10% to 90% RH, non-condensation.

Storage: 5% to 95% RH, including condensation.

#### 3.3 SHOCK AND VIBRATION

#### 3.3.1 SHOCK NON-OPERATION

The unit shall be subjected to a series of six(6) shocks, one(1) on each side,

Top and bottom. Each shock shall consist of a 50G half sine wave pulse with

a velocity change of 167 in/sec.

#### 3.3.2 VIBRATION

Operating: 10-250Hz, 0.25Gs peak to peak, 3 axes, 15 min sweep.

Non-Operation: 10-300Hz, 2.0Gs peak to peak, 3 axes, 15 min sweep.

#### 3.4 CALCULATED MEAN TIME BETWEEN FAILURES (MTBF)

Power supply shall have a calculated MTBF of greater than <u>30,000</u> hours, calculated utilizing MIL-HDBK-217F with the following assumptions:

Input voltage: 230Vac / 50Hz

Output load: reference Table 2

Ambient temperature: 25 degrees C

#### 4. SAFETY

Unless otherwise specified, the supply is designed to meet <u>IEC 60335 edition</u> and/or equivalent safety standards for use in Battery Charger Equipment. Specific agency certifications will be applied at customer's request and cost.

CB: IEC 60335 (under application)

#### 4.1 DIELECTRIC VLOTAGE WITHSTAND (HI-POT)

The power supply shall withstand following Hi-pot test without breakdown.

4242 Vdc line to ground for 1 minute.

4242 Vdc input to output for 1 minute.

#### 4.2 PRODUCT DROP TEST

Number of Drops: 3 times.

Height: 90 cm

Floor surface: Concrete Floor

Judging Criteria: To withstand Hi-Pot Test, and without electrical breakdown.

### 4.3 BALL IMPACT TEST

Ball Spec.: Steel Ball, Diameter=51.8 m/m, Weight=535 gw

Height of Drop : 90 cm

Number of Drops: 3 times.

Judging Criteria : To withstand Hi-Pot Test, and without electrical breakdown.

#### 4.4 STRAIN RELIEF TEST

The strain relief withstand a pull force of 35 lb applied for 1 minute in a direction mostlikely to cause damage.

#### 4.5 CLAMP ATTACHMENT SECURITY

Conductor is securely attached to clamp, conductor to clamp connection withstands a 35 lb tensile load without separation.

#### 4.6 HANDLE ATTACHMENT SECURITY

Handle to enclosure connection withstands 4 times weight of the charger with separation.

#### 4.7 CLAMP RETENTION

Clamp provides good terminal gripping capability. Clamp does not become dislodged from 5/8 inch diameter lead terminal post when pulled with a force of 10 lb at 90 degrees to the axis of the clamp.

#### 4.8 CORROSION RESISTANCE

Clamp demonstrates no excessive surface corrosion after 12 hours exposure to 100% humidity 100°F.

# 5 EMC SPECIFICATION

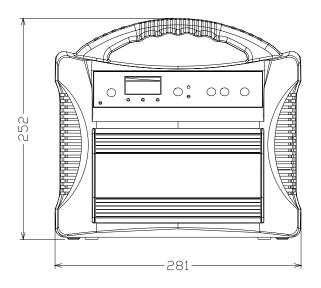

## **5.1 EMI REQUIREMENTS**

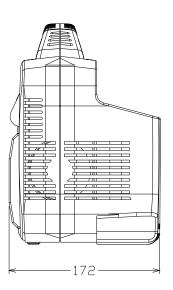

CE at system load.

# 6 MECHANICAL

# **6.1 DIMENSION**

# **6.1.1 PRODUCT**

# **6.2 MATERIAL**

# 6.2.1 ENCLOSURE

Housing – Plastic ABS UL 94-V0

Foot Pad – NBR Rubber

#### **6.2.2 CLAMP**

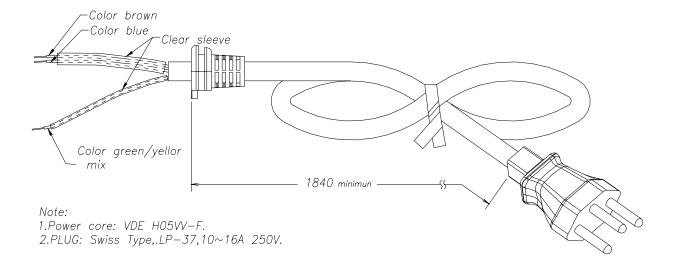

Clamp - SPCC, Nickel-plate

Clamp Spring – SUS-4

Handle - PVC

## 6.3 INPUT CONNECTOR AND OUTPUT CABLE

#### 6.3.1 INPUT CONNECTOR

#### **6.3.2 OUTPUT CABLE:**
