DIGITAL STROBOSCOPE

Model: DT-2269 *ISO-9001, CE, IEC1010*

FEATURES

- * Push keyboard setting.
- * External trigger input.
- * RS232 computer interface output.
- * Flash rate : 5 to 10,500 RPM/FPM. 0.083 to 175 Hz
- * Display 14 mm LED, 6 digits.
- * High resolution.
- * Main function : Fine adjust, Coarse adjust, Multiply by 2, Divide by 2, Fast finder, Memory recall.
- * Memorize 10 sets of measuring data.
- * Crystal time base and microprocessor circuit, not necessary take any calibration procedures.
- * Power supply : AC 110V/220V/230V, 50/60 Hz.
- * Application for inspecting and measuring the speed of moving gears, fans, centrifuges, pumps, motors, general industrial maintenance, production, quality control, laboratories, schools and colleges...

DIGITAL STROBOSCOPE, Model: DT-2269

FEATURES

- * DT-2269 is a microprocessor circuit design, high accuracy, digital readout STROBOSCOPE. Adjusting the "Flash Rate" by push button keyboard, unique design in the world, easy operating & with intelligent function. That is ideal for inspecting and measuring the speed of moving gears, fans, centrifuges, pumps, motors and other equipment used in general industrial maintenance, production, quality control, laboratories and as well as for schools and colleges for demonstrating strobe action.
- * External trigger input.
- * RS232 computer interface output.

	OPERATIONS PROCEDURES
Preparation	(a) Plug unit into a properly grounded 110V AC, 220V AC or 230V AC outlet.
	(b) Turn the power switch to " on " position. (c) Determine the range switch to " Low " or " High " position.
Checking Speed	When checking speed, care must be taken to insure that the strobe is flashing in unison (one to one) with the object being monitored. A Stroboscope will also stop motion at 2:1, 3:1, 4:1 et., this is normally referred to as harmonies. To be sure of unison, turn the dial until two images appear - this will double the actual speed. Then lower the flashing rate until a single and stationary image appears - this is the actual true speed.
Checking Motion	For motion analysis, simply locate the actual speed as mentioned above and then turn the dial slowly up or down. This will give a slow motion effect allowing complete inspection.

Remark	When order the stroboscope, should inform the power supply type is AC 110V, or
	220 V or 230V.
