

NEW PRODUCT

SMARTPASS

QUALITY WITH SIMPLE CONNECT & FORGET CHARGING

SMARTPASS is an energy management unit which controls and optimises energy produced by alternators, solar cells, wind power or conventional AC/DC chargers. It distributes the power to the battery banks or consumers which require energy, such as the deep cycle bank, bow thruster batteries, consumers, etc. Used together with a D250S DUAL, SMARTPASS provides optimal charging via CTEK's unique staged charging cycle, which also protects your batteries. SMARTPASS also has an integrated battery guard which protects deep cycle batteries from harmful total discharge and ensures that critical equipment such as radio, emergency lights and navigation systems always function. SMARTPASS has a temperature sensor which protects batteries against high temperatures.

SMARTPASS is a fully automatic energy management system which can handle up to 80 A for batteries between 28-800 Ah. The energy management system is IP65 classified (water jet and dust protected and approved for outdoor use). Suitable for all types of 12 V lead-acid batteries.

TECHNICAL DATA

CHARGING CURRENT	80 A
TYPE OF BATTERY	12 V lead-acid batteries
BATTERY CAPACITY	28-800 Ah
INSULATION	IP65 (splash and dust proof)

AUTO

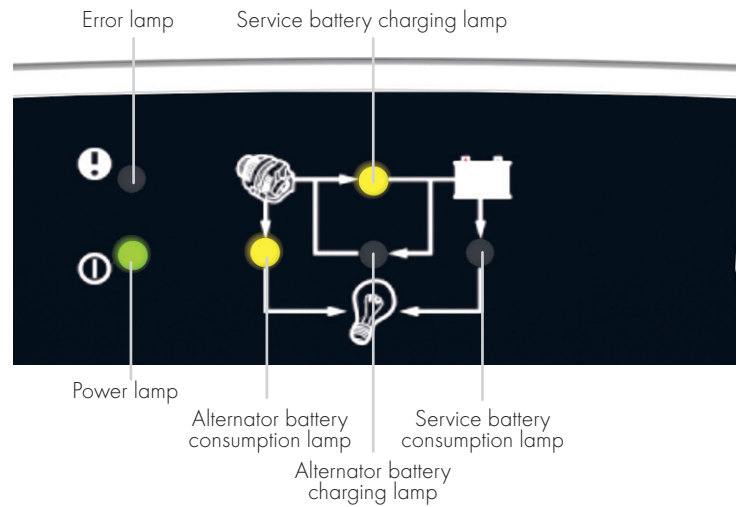

Fully automatic for optimal charging

12V

For all lead-acid batteries

THE SMARTEST BATTERY CHARGERS IN THE WORLD

FEATURES

- Battery separation eliminates diodes and VSR relays
- Charging of service batteries up to 100 A, reducing recharge time
- Separation of energy-consuming equipment and service batteries during charging increasing the expected life of 12 V devices such as light bulbs, LEDs and other electronics. Allows the battery to be charged from the alternator at a level that minimises recharge time [patent pending]
- Temperature protection of services batteries reduces charge current at high temperatures [patent pending]

BENEFITS

- Maximised battery life as a result of reduced incidences where the battery is undercharged
- Reduced charging times and costs by decreasing engine idling
- Reduced dependency on AC power onshore through efficient use of alternator and solar power
- Reduced environmental impact through extended battery life and a reduced idle time
- Minimal installation time and cost

SUITABLE FOR

- Boats
- Campervans and RVs
- Caravans
- 4WDs
- Heavy vehicles

COMPATIBLE WITH

D250S DUAL

INTEGRATED SYSTEM

Combining the D250S DUAL and SMARTPASS ensures optimal battery charging. The SMARTPASS manages the energy transfer through the D250S DUAL, which then converts and produces the optimal voltage of 14.4 V, even if the alternator only produces 14 V.

BATTERY WATCH TECHNOLOGY

CTEK's built-in Battery Watch technology allows the SMARTPASS to make full use of the majority of energy produced (up to 95 %) and distributes the power servicing battery banks, bow thrust batteries and electrical equipment such as navigational systems. The SMARTPASS, properly manages and distributes power, directing energy to where it is needed most. This ensures that service batteries are protected from being deeply discharged, providing batteries with an optimal service life and reducing the frequency and need for regular traditional charging.

PROTECTION FROM HIGH TEMPERATURES

The SMARTPASS has a sensor which senses the battery temperature and reduces charge current at high battery temperatures.

SIMPLIFIED INSTALLATION

The SMARTPASS eliminates the need for units with multiple outputs. All batteries can be charged and maintained through the unit. The SMARTPASS converts a 110/230 V charger with one output into a unit that serves both the service and starter battery.

GUARANTEED QUALITY WITH CTEK

CTEK customer support is available to answer any questions related to charging and CTEK chargers. Safety, simplicity and flexibility characterize all products and solutions developed and sold by CTEK. CTEK supply chargers to more than 60 countries throughout the world. CTEK is also a reliable OEM supplier to many of the world's most prestigious car and motorcycle manufacturers.
