## MG SmartLink Connect

MGSLC48001

## Description

The SmartLink Connect is the external battery management system. It is the central unit which controls all connected components. This includes 3rd party chargers, MG energy monitor and inverters. Furthermore, it monitors and tracks all parameters to provide insight into the status and daily energy consumption. It gathers and combines all battery and communication data in the MG battery system. All data is transmitted over CAN-Bus to make it available for third party devices. The SmartLink Connect detects the state of the system, including warnings and errors, and intervenes when needed.
