

Marine compliance to **AS/NZS3004** made easy

voltgo

SIELTEC
innovative design

Make headway with this powerful duo: VoltGo And Sieltec

VoltGo's Elite Series Lithium batteries can now be installed into marine applications to meet the stringent AS/NZS3004 standard with the addition of a *Sieltec VG-1BM battery monitor*.

The touch screen of the VG-1BM provides a simple and secure way to monitor battery parameters, while the alarm panel mountable at the helm alerts the skipper

with an audible alarm if these parameters reach a point where disconnection may take place. The hardwired unit scans the various registers in each battery and relays valuable information from the internal BMS.
