1. Introduction

Late 2021 / early 2022, the hardware of the MultiPlus-II GX and EasySolar-II GX product range has been updated. There are two feature changes:

- 1) Adds Bluetooth, useful to easily configure the Wifi and Ethernet networking using our VictronConnect App.
- 2) The built-in CAN-communications port has been changed. Until now it was a limited 500kbps BMS-Can only type, which can only be used to connect to certain 3rd party lithium batteries. The updated hardware contains a full featured VE.Can port (non-isolated). Allowing it to connect to, for example, our high power Smart Solar Charger range including the MPPT RS series.
