

Solar charge controller Smart-N5

The Smart-N5 (or SMR20-N5) comes with default settings that can be altered and programmed to suit user specific requirements. It is important that the solar charge controller is correctly programmed as requirements will differ between different battery chemistries:- ie Lithium Ion (Lilon) / Lithium Iron Phosphate (LiFePO4), Gel and Wet cell batteries.

Master Instruments' technical team can program the SMR20-N5 according to user requirements when we receive a completed copy of this form with a purchase order. Please contact our sales desk for programming costs.

BATTERY TYPE / CHEMISTRY

The SMR20-N5 comes with default settings that may not suit your type of batteries. What is the type/chemistry of your battery/ies? *Please tick.*

Gel
 Liquid
 Lithium Ion (Lilon)
 Lithium Iron Phosphate (LiFePO4)
